

Introduction

WHAT IS BLUETOOTH?

Bluetooth is an international standard that allows electronic components to communicate with each other, using a short-range radio link. Bluetooth eliminates the need for wires or cables: typically, devices can communicate at a range of up to 10 metres (33 feet).

The Bluetooth in-car telephone system allows certain mobile phones to be used hands free in your vehicle: there is no need to connect the mobile phone to a cradle or cable.

Bluetooth is a registered trademark of Bluetooth SIG, Inc.

SYSTEM OVERVIEW

The vehicle's Bluetooth telephone system can be used with an appropriate, Bluetooth-equipped mobile phone.

The mobile phone must be paired with the vehicle system before use. See page 21 for more information.

Once paired, the mobile phone can be operated via the steering wheel switches or the keypad and phone buttons on the audio panel or touch-screen. The mobile phone doesn't need to be physically connected to the vehicle: it can be left in a jacket pocket, for instance. Calls are routed through the vehicle's audio speakers, and a dedicated microphone is fitted to the roof lining, near the driver's head.

You can use the system to answer or reject incoming calls, make outgoing calls or alter the call volume. The system does not support SMS text messages.

Note: *The vehicle ignition must be set to position I or II in order to use the phone.*

Call volume

The volume of telephone calls can be adjusted for hands-free phone operation. To adjust the volume, operate the audio system's ON/OFF volume control during a phone call.

If the audio system is in use when the phone becomes active, the audio system source is suppressed for the duration of the call.

The Jaguar telephone system is designed to function with a wide variety of Bluetooth-equipped mobile phones. The audio and echo characteristics vary between models of mobile phones: as a result, it may take a few seconds for the vehicle system to adapt to provide optimal audio performance.

In order to achieve the best possible audio performance, it may be necessary to reduce the system volume slightly when using certain mobile phones.

Audio panel display

Phone related messages are shown on the audio panel display or touch-screen (where fitted) when the phone system is active.

Introduction

ABOUT THIS HANDBOOK

Take particular note of the following symbols used throughout this manual:

Note: *A note contains additional information which is relevant to the feature/item.*

Caution: **A caution contains important additional information that is relevant to the efficient and/or safe usage of the telephone system.**

WARNING:

A warning is a procedure which must be followed precisely to help avoid the risk of personal injury.

VOICE ACTIVATION

(Where fitted)

The Bluetooth telephone system can be used in conjunction with the Voice Activation System to provide the driver with completely hands-free communication. Voice commands are picked up by the system microphone.

For information about using voice activation, refer to the audio systems and JaguarVoice handbook, or the touch-screen display handbook.

WARNING:

The voice activation system must not be used to call emergency numbers, as voice patterns can change under stress, resulting in commands becoming unrecognisable.
